Luca Becchetti

I am a **professional programmer** and **AI Enthusiast** with a background in software design and development, currently i am a leader of Brokenice Technologies that provides high-performing custom software for leading brands.

Im **high skilled in Software Design** i have been worked since i was young as webmaster, and im a senior Php developer. In the last years i have been worked hard with mobile application programming, Swift for ios world, and Java for Android world.

Im an **expert mobile developer** and architect with several years of experience of team managing, design and development on all the major mobile platforms : iOS, Android.

Im also has **broad experience on Web design and development** both on client and server side and API / Networking design. All my last works are hosted on AWS Amazon cloud or Google Cloud Platform, im able to configure a network, with Unix servers.

COMPETENZE

- Web Development
- Inglese (Professional Working)
- (PHP, HTML, JS, codeingiter, laravel, and more frameworks)
- Artificial Intelligence
- Mobile Development
- Senior Software Engineer
- OOP Programming
- LAMP ecosystem
- Database design

LINGUE

- Italiano | Madrelingua
- Inglese | Livello avanzato. Wallstreet Institute

ESPERIENZA

Gen 2019
Attuale
CEO
Brokenice Technologies s.r.l   .
Brokenice Interactive it's a team of senior software engineering, we can make cloud based enterprise custom software for leading brands. A growing company that has reached almost **500.000€** in revenue.

Giu 2021
Gen 2024
SENIOR PROJECT MANAGER
Jettison, Inc.   Nashville
Jettison's mission is to be the leader in low-cost easy-access health care, and they are passionate about providing quality health care services to everyone.

PROGETTI

Project: OpenASP - A Custom CMS in ASP

Duration: Early 2000s

At the age of eleven, I developed OpenASP, a **custom Content Management System (CMS)** built using Active Server Pages (ASP). This project was widely adopted and successfully **powered over 10,000 websites** for several years, demonstrating its reliability and scalability. OpenASP was designed to simplify website creation and management, offering features such as dynamic content generation, user authentication, and database integration.

As the web development landscape evolved, **ASP became deprecated** and I made the strategic decision to retire OpenASP. This transition marked a pivotal moment in my career, as I shifted my focus to learning PHP and exploring modern web development frameworks. The experience of building and maintaining OpenASP not only honed my technical skills but also taught me valuable lessons in project management, user support, and adapting to technological changes.

While **OpenASP is no longer active**, its legacy lies in its contribution to the early web ecosystem and its role as a stepping stone in my journey as a developer. This project reflects my passion for innovation, problem-solving, and continuous learning in the ever-evolving field of technology.

Project: Nitrogen - A Proprietary Admin Panel Framework

Duration: 2025 - Current under devloping

I developed **Nitrogen**, a proprietary admin panel framework designed to streamline backend management for web applications. Nitrogen was built to offer a **highly customizable and developer-friendly solution for creating dynamic admin interfaces**. The framework was tailored to meet the specific needs of internal projects and clients, providing features such as:

- **CRUD Operations**: Simplified creation, reading, updating, and deletion of database records through an intuitive UI.
- **Customizable Dashboards**: Allowed developers to build tailored dashboards with widgets, charts, and real-time data visualization.
- **Role-Based Access Control (RBAC)**: Implemented advanced user permissions to ensure secure access to sensitive data.

API Integration: Seamlessly integrated with RESTful APIs and third-party services for extended functionality. Nitrogen was built using Laravel for the backend and Vue.js for the frontend, leveraging modern web technologies to ensure performance and scalability. The framework significantly reduced development time for admin panels, enabling teams to focus on core application logic rather than repetitive backend tasks.
