

## **Avviso di seminario**

**Mercoledì 29 giugno alle 15.00 in Aula A0**

la **dott.ssa Valentina Franzoni** terrà un seminario dal titolo:

### **Ethical Artificial Intelligence, and Bias: what we can and can't change**

La dott.ssa Franzoni, oltre a svolgere attività di ricerca in Intelligenza Artificiale, presso il nostro Dipartimento è attualmente docente presso il Department of Computer Science della Hong Kong Baptist University.

#### **Abstract:**

The AI, IoT, VR, AR, are ubiquitously integrated into every aspect of human and social life. Increasingly, it appears critical to establish trust and harmonize systems around humans: from human comfort and health to conveying to users the reliability of deep learning systems and robotics, even clearly exposing their limitations along with addressing their usefulness. The harmonious integration of applications in society develops the ability of the individual to adapt positively to change (resilience and response) only if, instead of imposing to humans an AI-centered world, the central focus is reorganizing AI to environments around all aspects of human life, presenting AI architectures and applications designed re-evaluating the ethics, and education of individuals and society through scientific research actors.
